This is what I see when I load the configuration: Project Diagnostics ... In my OPC Scout V10 I see all the DB, variables and tags in the OPC. I only see these variables in OPC Scout, so I can't do this in OPC DB or in OPC Scout. So what I get from this is: Opc Scout Binding. Opc Scout Binding is a data structure used to bind data to an OPC server. It contains information about the OPC server, such as the server name, database name, application name, etc. The data stored in the field can be used by both the OPC server and the OPC application. How can I get the names of the OPC server variables that are in the OPC DB
